

PETPROOF

Pet resistant fabrics

WHAT IS PETPROOF?

-  Toptextil fabrics labeled with the PETPROOF mark show increased resistance to scratches and thread pulling from animal claws.
-  PETPROOF fabrics have a fine weave and smooth surface, so that the coat does not stick to the material and is easy to remove with a clothing roll or a damp cloth.

HOW TO TAKE CARE OF FURNITURE?

- 🐾 Teach your pet good behavior, invest in a special pet bed and a cat scratcher, and teach them how to use these places by rewarding good behavior with treats; never let them scratch furniture
- 🐾 Keep your pets hygienic by combing them regularly and cutting off their claws; this will reduce the amount of fur in the whole house and reduce scratches, not only on furniture
- 🐾 Do not scrub upholstery fabrics, we recommend cleaning with the grain, and without using strong detergents; remove animal hair with a clothing roll or damp cloth;

Fabrics marked with Cleanaboo and PETPROOF are a perfect combination. Not only are they not afraid of claws and hair, but they also limit the absorption of liquids, so that upholstered furniture will retain its fresh look for a long time.

HOW DO WE PERFORM TESTS?   

PETPROOF fabrics are certified in accordance with PN-79/P-04664 standard issued by the Textile Research Institute. The scratch resistance test consists of placing a fabric sample on a roller and subjecting it to the action of metal spikes which, while bouncing off the rotating roller, imitate the action of animal claws.

The test result is given on a 5-point scale

     5 means the lack of pulling and the highest resistance

   3 or more means sufficient resistance for pets

 1 means numerous snags
